PROFILE

Hey I'm Márk Ticzer 19 year old, I play videogames and mostly program videogames or websites.

In the last year of primary school we had python programming and I have gotten a scholarship for being the best python programmer in the whole school but since then I have learned many new things and many new languages related to programming. For example I learned to use Unity with VR and we started a new VR-project for our school and their students. Tried some Unreal Engine as well. I know how to model and I am one of the modellers in our VR-project. I have used servers for Web Development and know basics about domains, how to set up your own server and how to modify files seen/used by the server with .htaccess.
I have used multiple operating systems, for example: Win XP, 7, 8.1, 10, 11, Debian Linux, PopOs Linux.

WORK EXPERIENCE

Work Practice Program
IT Support/Web Dev

Päivölä institute   2021-2022

- In 9th grade we had work practice programs and I went to a school to work as a it support person and as a web developer.
- One of the jobs I got while doing web development was creating a web page for a website the school's been working on.
- I build PC's and tested all school devices including routers.

Work Practice / Hired employee
IT Support|Web/Software Dev

CADMANDATA Oy   October 2023 - May 2024

- At CADMANDATA I worked in making their websites look cleaner and more responsive, add new products onto their webshop, do customer service in person or on the web, make custom functions to their websites to help with boring repetitive tasks.
- Handled their AWS backend for either updating a website or managing a database.
- I've also send a lot of packages out that people ordered from their webshop.
- These were used the most during any development: AWS - WordPress - Grav - Linux
- And with these languages: HTML - CSS - JavaScript - Python - Shell scripting
